

The new e-GEOS (ASI/Telespazio) website is online

From today, the new e-GEOS website is online, with more content, in-depth information, and news, as well as with completely redesigned graphics.

The home page is devoted to news, with a gallery of satellite images that will help to track important events taking place on our planet. For example, thanks to COSMO-SkyMed images on the Google Earth interface, it is possible to follow the movement of the oil spill from the Deepwater Horizon platform in the Gulf of Mexico.

The new site also has a featured image section, devoted to the most spectacular images of the globe, and a gallery of evocative very high resolution optical and radar satellite images.

Moreover, on the COSMO-SkyMed products page, clients can access catalogue images – a practical tool for researching available data, which allows images to be ordered online.

On the Airborne section, clients have access to the REALVISTA catalogue, which allows selection and ordering of aerial images of the whole of Italy's area as well as the main Italian cities, with varying degrees of resolution (50, 20, and 10 cm).

Finally, the Applications section is full of case histories and multimedia content.
