

TELESPAZIO TV DIGITAL PLATFORM ON THOR AND AMOS SATELLITES

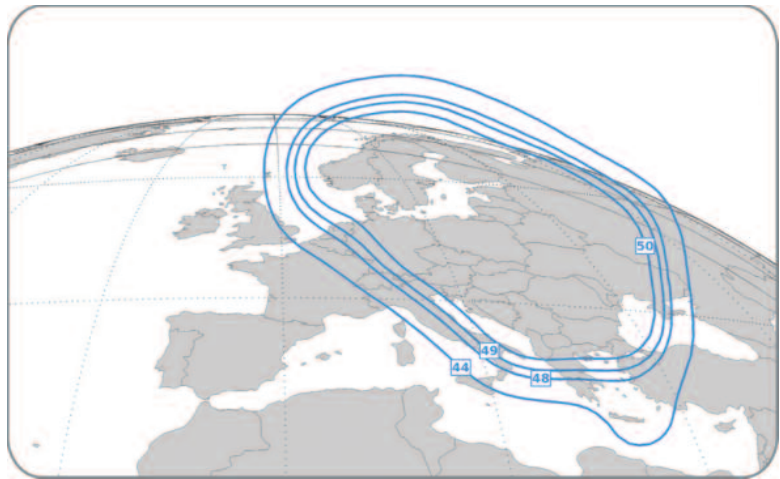

COST-EFFECTIVE SERVICE FOR CONTENT DISTRIBUTION OVER EASTERN EUROPE

The consolidation of DTH technology has enlarged the opportunities for the satellite broadcasting market, with new offers of services dedicated to specific European and Middle East regions. The interest of TV and radio networks to broadcast their programs in these areas have grown substantially during last years.

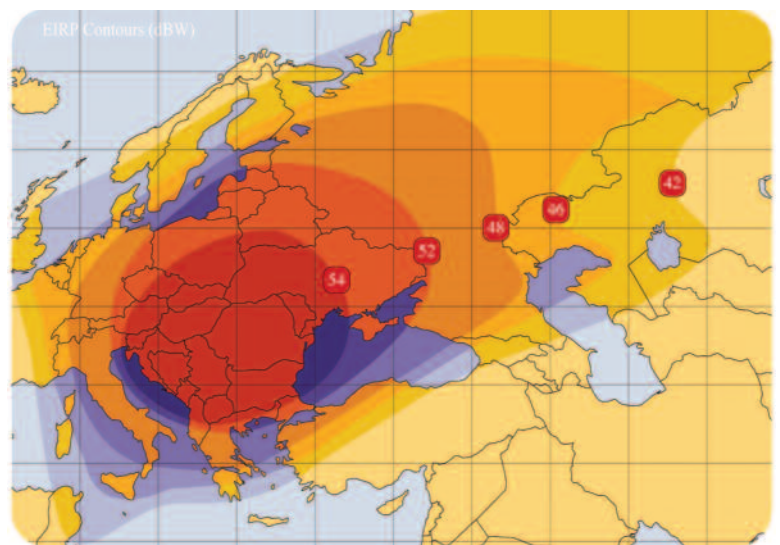

Thanks to the long experience in providing satellite services and to our consolidated role as international partner for the broadcasters' market, the **Telespazio TV Digital Platform** solutions offer to the customers a cost-effective service for both the distribution and

the contribution of TV and radio programs over **Eastern Europe and the Middle East**. The Platforms are operating on **THOR** and **AMOS** satellites, two of the most popular systems for content distribution and delivery.

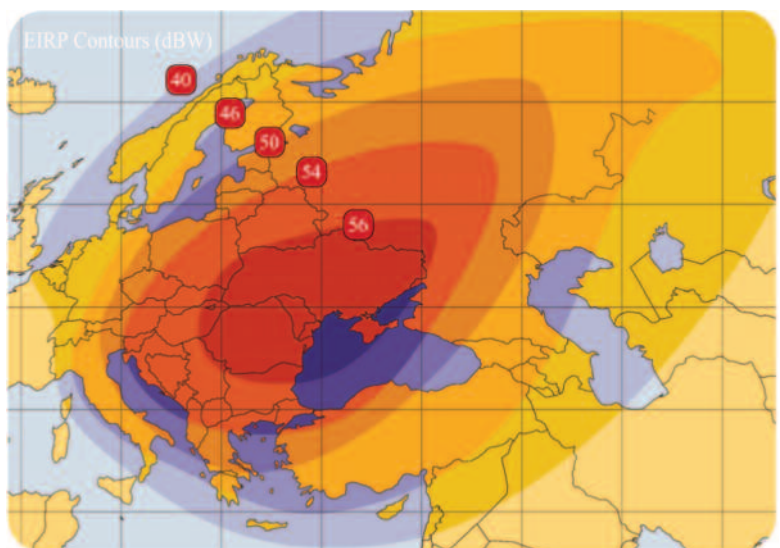

The service is provided from our teleports which can rely, for the delivery of the signals, on a fast and reliable connectivity to the international fibre optics network.

THOR @ 1° W typical KU band downlink coverage

AMOS 2 @ 4° W typical KU band downlink coverage

AMOS 3 @ 4° W typical KU band downlink coverage
